24/7 Virtual Access

Instant connection to your dedicated care team and elite specialists anytime, anywhere. Experience healthcare without boundaries.

Global Specialist Network

Priority access to the world's leading medical minds, selected for their clinical brilliance and outcomes. Your health, globalized.

Executive Health Assessments

Comprehensive diagnostic screenings and preventative protocols designed for high-performance lifestyles. Optimization through data.

THE CORNERSTONE

The Annual Assessment

Our proprietary assessment protocol goes beyond traditional medicine. We leverage cutting-edge genomics, high-resolution imaging, and functional biomarkers to create your unique biological blueprint.

- Whole-Genome Sequencing
Identifying future risks with predictive precision.
- Advanced Metabolic Profiling
Real-time data on nutrition and hormonal optimization.
- Elite Cardiac Screenings
Non-invasive, AI-enhanced cardiovascular mapping.

Ready to elevate your healthcare journey?

Admission to LifeCore Concierge is limited to maintain our unparalleled standard of individual attention and care precision.

Precision Molecular Analysis as Standard Protocol.

The lifeCore Difference

Zero Compromise

We reject the status quo of high-volume medicine. Each member receives an exhaustive, individual-first approach where time is never an obstacle to diagnostic depth.

Holistic Precision

Integrating epigenetic mapping, lifestyle data, and specialist consultation into a singular, cohesive health strategy designed for longevity.

2. Module I: Authentication System

The authentication system is highly secure and role-based, categorizing users into `Admin`, `Doctor`, and `Patient` roles. It prevents unauthorized API access across all protected endpoints.

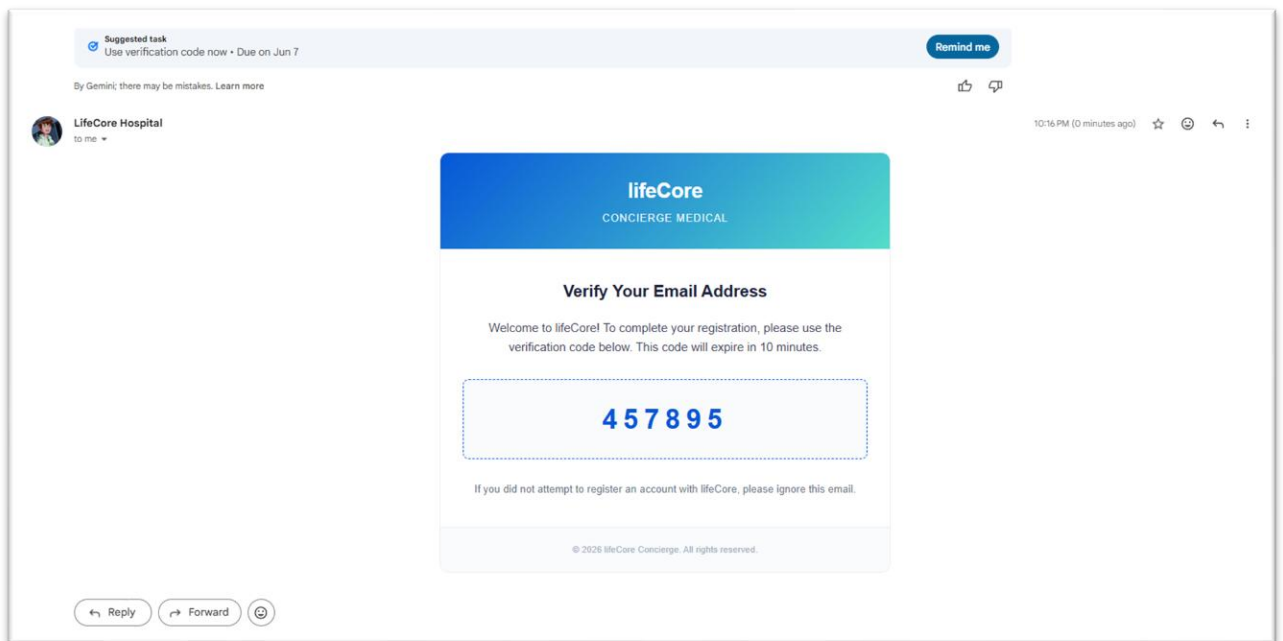

Implementation Details:

- **Secure Registration:** Users provide their details, which are rigorously validated. Passwords are securely hashed using `bcrypt` before database insertion.
- **OTP Email Verification:** To ensure the validity of user emails, a 6-digit OTP is generated upon registration and sent to the user's inbox via a custom HTML-formatted Nodemailer template. The user must verify this code to unlock their account.
- **JWT Login & Logout:** Upon successful verification and login, a JWT token is generated. Protected routes restrict dashboard access strictly to authenticated sessions. Secure logout functionality is implemented to clear cookies and session data.
- **Role-Based Access Control (RBAC):** Express middleware checks the JWT payload to ensure users can only access endpoints matching their specific roles.

The screenshot displays the 'Join lifeCore Concierge' registration page. At the top, the 'lifeCore' logo is on the left, and a 'Secure Login' button is on the right. The main heading is 'Join lifeCore Concierge', followed by a subtext: 'Complete your registration to access personalized health insights and world-class medical support.' The form is divided into two columns: 'Personal Details' and 'Medical History'. The 'Personal Details' column includes fields for 'Full Name' (filled with 'Patient-Test'), 'Email Address' (filled with 'shamoli003@gmail.com'), 'Password' (masked with dots), 'Age' (filled with '21'), and 'Phone' (filled with '+9276876876'). The 'Medical History' column includes a 'Blood Group' dropdown (filled with 'A+'), a 'Known Allergies' text area (filled with 'Peanuts , Penicillin , ~~Lorin~~ , Lactose'), and a 'Chronic Diseases' section with a list containing 'Synositis' and 'HyperTension'. A blue '+' button is next to 'Synositis', and a red trash icon is next to 'HyperTension'. Below the form is a large 'Register as Patient' button. At the bottom, there is a link: 'Already have an account? [Login](#)'. A small 'N' logo is in the bottom left corner.

3. Module II: Doctor & Patient Management System

This module encompasses the core CRUD operations for handling hospital records, strictly adhering to the 15-record data constraint to simulate a fully-populated concierge clinic.

Implementation Details:

- **Data Models:** Separate Mongoose schemas for `User`, `DoctorProfile`, and `PatientProfile` ensure that generic auth data is kept separate from specialized medical data (e.g., allergies, chronic diseases, schedules).
- **CRUD Operations:** Fully functional API endpoints allow administrators and doctors to add, view, update, and delete patient records and doctor profiles.
- **Doctor-Patient Assignment:** The system supports dynamic assignments where doctors are explicitly linked to specific patients for long-term care management.
- **Input Validation:** Both the Next.js frontend forms and Express backend controllers rigorously validate all input fields to maintain database integrity.
-

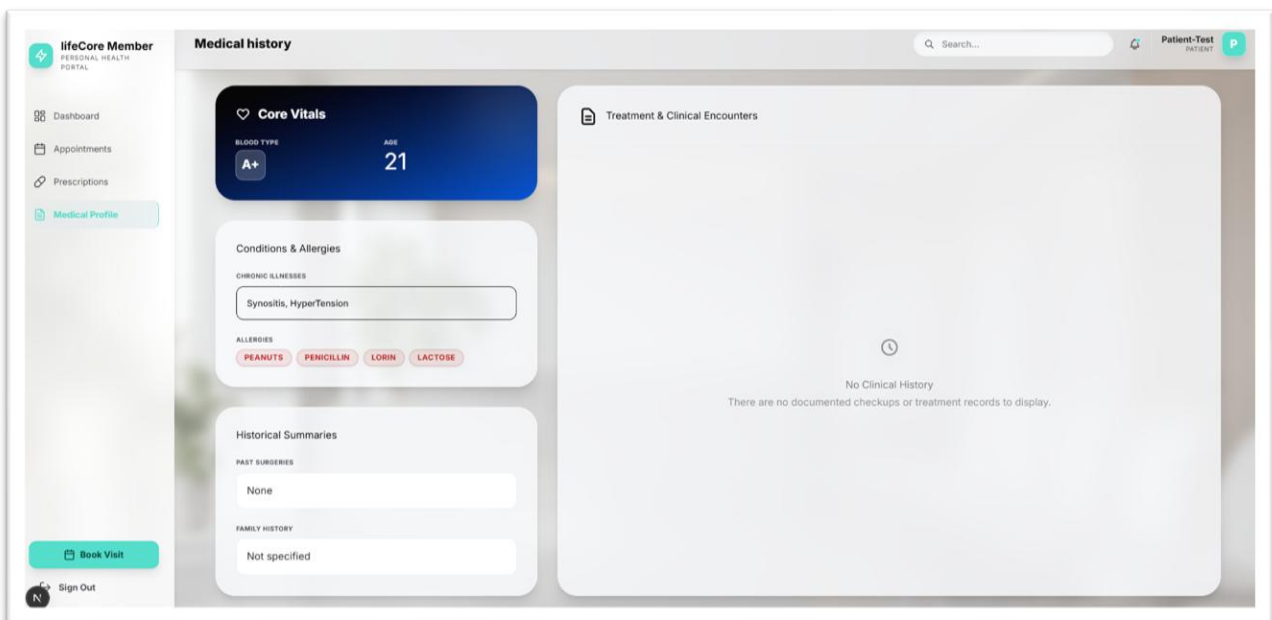

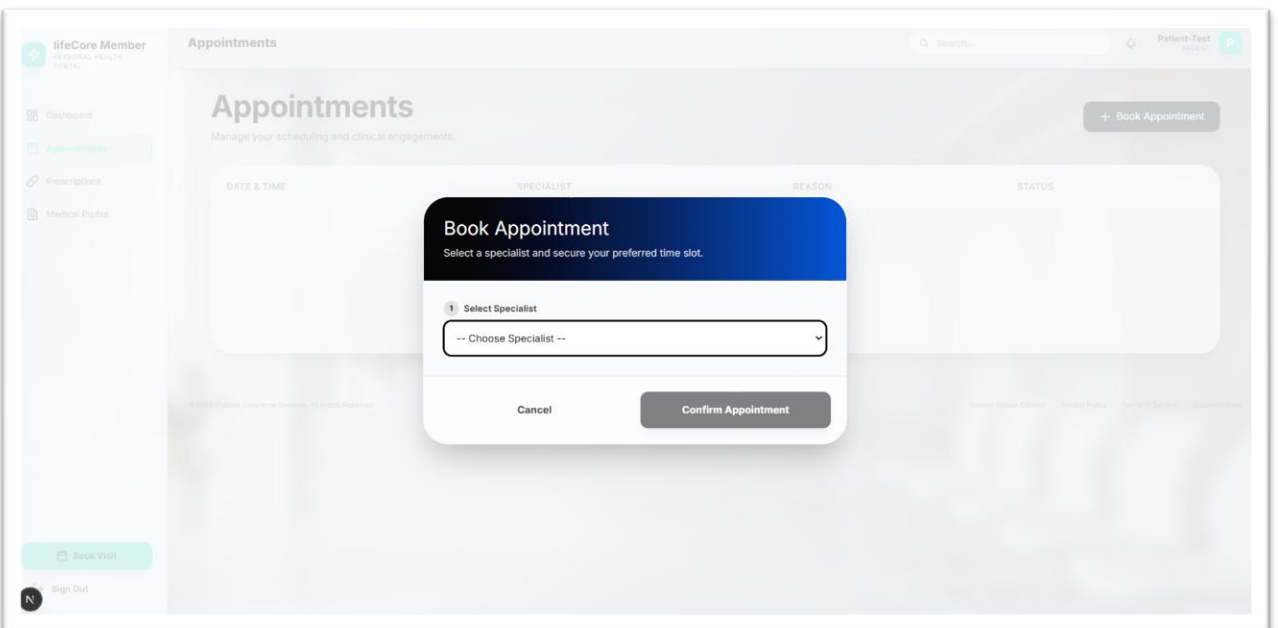

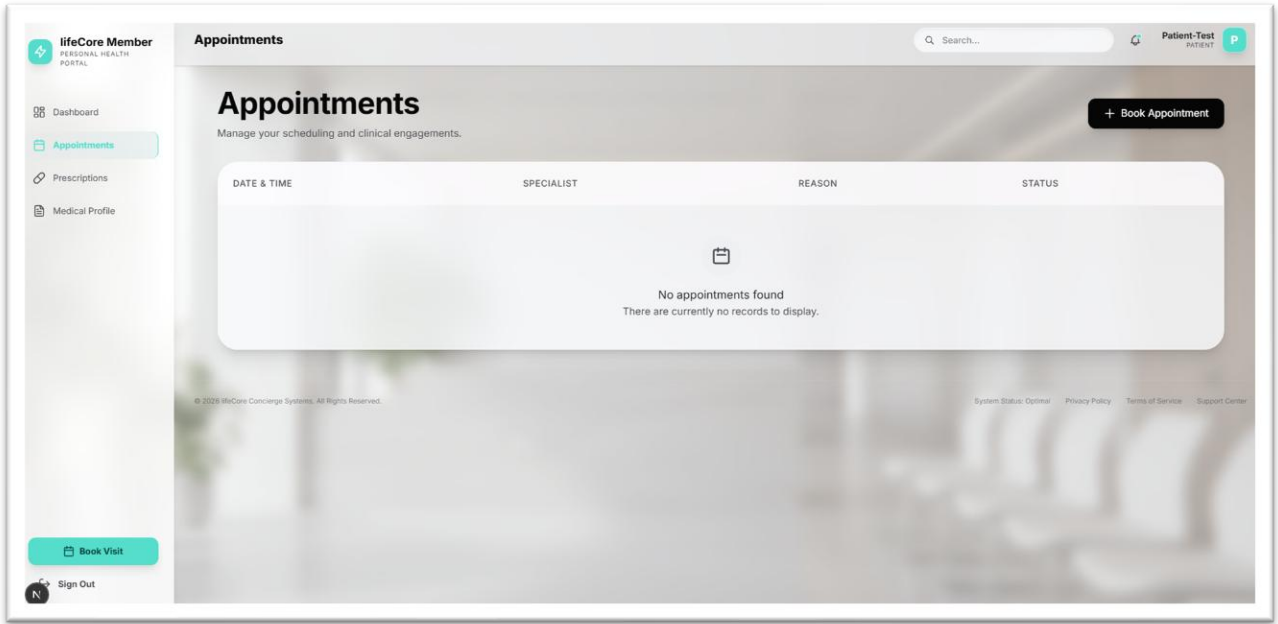

4. Module III: Appointment & Treatment Management System

This is the operational core of the hospital, facilitating real-time scheduling and detailed medical record tracking.

Implementation Details:

- **Appointment Booking:** Patients can request appointments based on their assigned doctor's specific daily availability. The system incorporates validation to prevent double-booking.
- **Status Workflow:** Appointments move dynamically through statuses (Pending, Confirmed, In Treatment, Completed, Rejected).
- **Automated Email Notifications:** Any change in appointment status automatically triggers a beautifully formatted HTML email sent to the patient's registered email address.
- **Prescriptions:** Doctors can seamlessly attach digital prescriptions to appointments, detailing medication names, dosages, frequencies, and durations. Patients are notified via email when a prescription is issued.
- **Treatment Tracking:** The platform tracks physical checkup metrics (height, weight, BP, Heart Rate) and treatment progress over time, storing medical history for easy retrieval.

5. Administrative Controls

The platform provides an overarching administrative view to oversee hospital operations, ensuring smooth management of both staff and patients. Admins possess the highest clearance for system-wide CRUD operations.
