Weather Api

A screenshot of a web browser window. The address bar shows 'localhost:5000/api/weather/karachi'. The page displays a JSON response from the Weather API for Karachi. The response includes the city name, temperature, condition, and humidity. A 'Pretty-print' button is visible at the top left of the response area.

```
{
  "city": "Karachi",
  "temperature": 38,
  "condition": "Clear Sky",
  "humidity": 52
}
```

News Api

A screenshot of a web browser window. The address bar shows 'localhost:5000/api/news/us'. The page displays a JSON response from the News API for the US. The response includes the country, total number of articles, and a list of article titles and sources. A 'Pretty-print' button is visible at the top left of the response area.

```
{
  "country": "us",
  "totalArticles": 5,
  "articles": [
    {
      "title": "Fed holds interest rates steady",
      "source": "Reuters",
      ...
    },
    {
      "title": "Apple unveils new AI features",
      ...
    },
    ...
  ]
}
```
